Dublin

A Modernised Beamer Template for Academic Use

Sam Deegan
University College Dublin
2026-09-01

What This Is

- A modernised Beamer template for academic use, in the tradition of Madrid and Berlin: a restrained palette and a layout built for exhibits.
- Written in markdown and rendered by Quarto, or written in LaTeX directly. Either way it compiles with pdflatex and needs no fonts installed.
- One deck covers a seminar, a job talk, a conference paper and a lecture.

The idea

Every element on the slides that follow is two or three lines of markdown. The theme handles the layout, the type and the colour.

Outline

1. Writing a Slide
2. Exhibits
3. Navigating and Teaching
4. The Theme Itself

SECTION 1

Writing a Slide

1. Writing a Slide
2. Exhibits
3. Navigating and Teaching
4. The Theme Itself

Headings and Lists

- One colour scale for both kinds of list.
 - A second level, quieter.
 - A third, quieter again.
- 1. Numbered runs the same scale.
 - a. Second level.

```
## Headings and Lists
```

- One colour scale
 - A second level
 - A third

1. Numbered runs the same
 - a. Second level

opens a section and draws a divider. ## starts a slide.

Callout Boxes

Takeaway

The claim to remember.

A finding. Title optional, as here.

Caveat

A limitation or an assumption.

Term

A definition, title inline.

Worked example

A step taken slowly.

```
::: {.takeaway title="Takeaway"}  
The claim to remember.  
:::
```

Five types, one shape. Green marks the takeaway, blue a result or worked example, grey a caveat, navy a definition; a code block takes light grey.

Headline Numbers

0.41 s.d. 1 in 4

the effect at the median

attenuation from measurement
error

62,400

unit-years in the panel

```
::: {.stats}  
- **0.41 s.d.** the effect at the median  
- **1 in 4** attenuation from measurement error  
:::
```

Two or three numbers per slide. A fourth is dropped and a warning printed, because four numbers at this size will not read from the back of a room.

Numbered Contributions

1 The first thing the paper does

One sentence saying why it matters, set smaller and in the body colour.

2 The second thing

The numbering comes from the list, so reordering the list reorders the slide.

```
::: {.contributions}  
1. **The first thing the paper does** One sentence saying why.  
2. **The second thing** The numbering comes from the list.  
:::
```

SECTION 2

Exhibits

1. Writing a Slide
2. Exhibits
3. Navigating and Teaching
4. The Theme Itself

A Figure

Figure: Estimated Effect by Period Since Treatment

Notes

Shaded band is a 95 per cent confidence interval. Notes sit under the caption, never inside it.

Two Figures Side by Side

Figure 2: Treated Units

Figure 3: Control Units

Notes

Realised path in navy, counterfactual dashed in green. A pair is two exhibits, so they number separately; put two side by side only when they share a scale.

A Regression Table

Table 1: Effect of Treatment on the Outcome

	Dependent Variable: Outcome _{i,t}			
	OLS		IV	
	(1)	(2)	(3)	(4)
Panel A: Independent Variables				
Treatment _{i,t}	0.081 (0.027)	0.115 (0.031)	0.196 (0.058)	0.188 (0.064)
Panel B: Fixed Effects				
Unit		✓	✓	✓
Year			✓	✓
Region–Year				✓
Panel C: Model Summary Statistics				
First-stage F	—	—	38.4	27.6
Observations	62,400	62,400	62,400	62,118

Notes

Treatment is instrumented in columns (3) and (4); fixed effects saturate left to right. Standard errors clustered by unit.

Equations

$$y_{it} = \alpha_i + \delta_t + \beta D_{it} + \gamma \sum_{j \neq i} w_{ij} D_{jt} + \varepsilon_{it} \quad (1)$$

Display maths is numbered, like tables and figures, with the counter running across the whole deck.

Wrap an equation in `::: { .nonumber }` when it should not carry a number.

SECTION 3

Navigating and Teaching

1. Writing a Slide
2. Exhibits
3. Navigating and Teaching
4. The Theme Itself

Appendix Jumps

Three levels of emphasis. Level one is green: use it for the slide you most expect to be asked about, and the quieter levels for the rest. The destination is an ordinary heading id, and `.back` marks a return button.

Appendix slides sit after the closing slide and number in Roman, so a long appendix does not inflate the page count the audience sees during the talk.

```
## Robustness {#rob}  
  
::: {.nav}  
- [Robustness]({#rob})  
- [Identification]({#ident}){.level2}  
- [Data]({#data}){.level3}  
:::
```

ROBUSTNESS

IDENTIFICATION

DATA

Contents, Handouts and Notes

A contents slide. ::: {.toc} under an ## Outline heading. Entries are live links, so a reader can jump to a section.

Speaker notes. ::: {.notes} stays out of the projected deck.

Handouts, two or four slides to an A4 page:

```
format:
  dublin-beamer:
    classoption: [t, handout]
    include-in-header:
      text: |
        \handouttwoup
```

References

Citations run through citeproc, so a Zotero export works directly (Angrist & Pischke, 2009; Callaway & Sant'Anna, 2021; Cameron & Miller, 2015). Point the front matter at a CSL style and the list is set for you.

```
bibliography: refs.bib  
csl: https://www.zotero.org/styles/apa
```

Put `::: {#refs}` wherever you want the list, rather than letting it fall where pandoc drops it. This deck puts it last, past the appendix.

SECTION 4

The Theme Itself

1. Writing a Slide
2. Exhibits
3. Navigating and Teaching
4. The Theme Itself

Palette

Table 2: The Palette

Token	Hex	Reserved For
 Navy	04204C	Headings, cover ground
 Blue	0056A4	Structure, links, section labels
 Green	61B77C	Badge, takeaway bar, list level 1
 Ink	212529	Body text
 Muted	6C757D	Footer, notes, third-level markers

Change these five tokens at the top of `dublin-theme.tex` and the whole deck follows: the boxes, the rules and the nav buttons all read from them. **Use the green sparingly** — it leads a list and marks the takeaway, and it stops meaning anything once it is on every slide.

Type

IBM Plex throughout: **Sans** for the slide, **Mono** for code, and Plex for maths rather than Computer Modern.

- Sans serif, so it holds at the back of a room.
- Ships in TeX Live, so nothing needs installing — Overleaf included.
- Has a maths version, so equations match the prose.
- Contemporary, and distinct from Beamer's default Computer Modern.

$$\hat{\beta} = (X'X)^{-1}X'y \quad (2)$$

Colour for Figures

Series

Sequential

Diverging

Figure: Series, Sequential and Diverging Scales

Notes

examples/dublin-mp1.py and examples/dublin-ggplot.R carry these plus the drawing conventions: axis labels in navy, ticks in grey, two spines, no grid, and a confidence band in the line's own colour at 16 per cent.

Start a Deck

```
---
title: "Your Paper"
subtitle: "The Subtitle"
author: "Your Name"
institute: "Your Institution"
date: "September 2026"
format: dubin-beamer

cover-photo: photo.png
cover-badge: Job Market Paper
cover-logo: crest.png
qr-code: qr.png
---
```

Copy `_extensions/` into the folder,
then `quarto render talk.qmd`.

Widescreen by default

Beamer still opens at 4:3; projectors and screens are widescreen. Override the format for the rare room that needs a square screen:

```
format:
  dublin-beamer:
    aspectratio: 43
```

What Ships With It

example.qmd a talk skeleton to copy and fill in: motivation, design, results, appendix.

stress.qmd every element at its limit — a four-line title, an empty frame, a table taller than a slide.

tests/check.py assertions over the built PDF — frame overflow, dangling jump links, gaps in the exhibit numbering, off-palette colour, captions out of Title Case.

tests/build.sh builds either deck and checks it.

Run it after you change the theme. A slide that has run past the footer still compiles, and a jump button pointing at a renamed label still renders, so neither shows up in a screenshot.

Thank you

BACKUP

Appendix

Data

- Sources, and the period each one covers.
- How the sample was built, and what it drops.
- Variable definitions.

BACK

Robustness

- Alternative specifications.
- Rolling windows.
- Placebo distribution.

BACK

IDENTIFICATION

Identification

A level-three destination: detail kept to hand but rarely needed.
